

# Shopping Bill

```
#include <stdio.h>

int main()
{
    float price, subtotal = 0, gst, finalAmount;
    int quantity;

    while (1)
    {
        printf("\nEnter product price (0 to stop): ");
        scanf("%f", &price);

        if (price == 0)
            break;

        printf("Enter quantity: ");
        scanf("%d", &quantity);

        float itemTotal = price * quantity;

        printf("Item Total = %.2f\n", itemTotal);

        subtotal = subtotal + itemTotal;
    }

    gst = subtotal * 18 / 100;
```

```
finalAmount = subtotal + gst;

printf("\n----- Shopping Bill ----- \n");
printf("Subtotal = %.2f\n", subtotal);
printf("GST (18%%) = %.2f\n", gst);
printf("Final Amount = %.2f\n", finalAmount);

return 0;
}
```
