1. Open Instagram's home page in Chrome, right-click on a post image, and use Inspect Element to find the exact HTML tag and CSS class used for the image container. Write down the tag name and class.

Steps:

1. Open Google Chrome and visit Instagram.
2. Open a post and right-click on the post image.
3. Click Inspect.
4. In Chrome DevTools, check the highlighted HTML element.
5. Find the HTML tag and CSS class associated with the image or its container.

Example answer:

```
<div class="example-container">
  <img class="example-image" src="image.jpg">
</div>
```

- HTML tag: img (image) or div (container), depending on the selected element.
- CSS class: The class shown in the highlighted HTML element.

2. Create a simple HTML file named myprofile.html that displays your name, a short bio, and a profile picture using appropriate HTML tags (h1, p, img). Open it in your browser and view the result.

Create a file named myprofile.html and write this code in it.

```
<!DOCTYPE html>
<html>
<head>
  <title>My Profile</title>
</head>
<body>

  <h1>Dhruv Patel</h1>
```

```
  <p>Hello! I am a beginner learning
  HTML and web development.</p>

  <img src="profile.jpg"
     alt="My Profile Picture"
     width="200">

</body>
</html>
```

Expected output:

Dhruv Patel

Hello! I am a beginner learning HTML and web development.

Example profile picture. Your own image will appear when you use your profile.jpg file.

3. Use Chrome DevTools to change the background color of your name (in myprofile.html) to any color you like, live in the browser, without editing the HTML file.

Steps:

1. Open myprofile.html in Chrome.
2. Right-click on the name Dhruv Patel.
3. Select Inspect.
4. In the Elements panel, select the <h1> tag.
5. In the Styles panel, click element.style and add:

background-color: yellow;

Your name's background will immediately change to yellow in the browser.

This is a temporary change. It does not modify your original HTML file, and it will disappear when the page is reloaded.

4. Draw a diagram or write a list showing the DOM structure (parent-child relationships) of your myprofile.html page. Include at least 3 levels (html > body > your content).

DOM stands for Document Object Model. It represents an HTML page as a tree of parent and child elements.

DOM Tree

└── html

└── head

└── title → My Profile

└── body

├── h1 → Dhruv Patel

├── p → Short bio

└── img → Profile picture

Parent-child relationships:

- html is the root element.
- head and body are children of html.
- title is a child of head.
- h1, p, and img are children of body.

This structure shows at least three levels: html → body → h1, p, or img.
