

1. NAME 5 IT JOB ROLES AND WRITE ONE LINE ABOUT WHAT EACH ROLE DOES.

ans:-

- Software Developer: Writes, tests, and maintains the code that builds software applications.
- Software Tester (QA): Evaluates software to find bugs and ensures it meets quality standards before release.
- Data Analyst: Gathers and interprets complex datasets to help organizations make informed business decisions.
- UI/UX Designer: Designs the visual layout and user experience to make applications intuitive and easy to use.
- Cloud Engineer: Designs, deploys, and manages a company's cloud computing infrastructure.

2. List 3 product companies and 3 service companies with one example of work each does.

ans:-

Product companies and 3 Service companies:

Product Companies:

- Google: Develops and maintains products like the Google Search engine and Android OS.
- Microsoft: Creates and sells software products like the Windows operating system and Office suite.
- Adobe: Builds and licenses creative software products like Photoshop and Illustrator.

Service Companies:

- TCS (Tata Consultancy Services): Provides custom software development and IT consulting services to other businesses.
- Infosys: Offers IT outsourcing, cloud migration, and application maintenance services to global clients.
- Accenture: Provides enterprise technology consulting and system integration services tailored to client needs.

3. Write the full forms and one-line use of: GitHub, Slack, Jira, IDE, API.

ans:-

Full forms and one-line uses:

- GitHub: (Derived from "Git") - A web-based platform used for version control and collaborative software development.

- Slack: Searchable Log of All Conversation and Knowledge - A messaging application used for team communication and workplace collaboration.
- Jira: (Derived from "Gojira") - A software tool used by agile teams for issue tracking, bug tracking, and project management.
- IDE: Integrated Development Environment - A software application (like VS Code or Eclipse) that provides a comprehensive toolkit for programmers to write and debug code.
- API: Application Programming Interface - A set of rules and protocols that allows different software applications to communicate and share data with each other.

4.Name any 5 programming languages and mention one popular use case for each.

ans:-

programming languages and popular use cases:

- Python: Widely used for data science, artificial intelligence, and backend web development.
- JavaScript: The primary language used for creating interactive and dynamic elements on front-end web pages.
- Java: Extensively used for building large-scale enterprise applications and native Android mobile apps.
- C++: Popular for high-performance applications like video game development and system software.
- SQL (Structured Query Language): The standard language used to manage, store, and retrieve data in relational databases.

5. What is the difference between a developer and a tester? Answer in 2 lines.

ans:-

Difference between a developer and a tester:

- A developer is responsible for designing, writing, and building the source code to create software features and applications.
- A tester evaluates that software by running various scenarios to identify bugs and ensure the product works exactly as intended before it reaches the user.
