

1. Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm).

A **program** is a set of instructions written in a programming language that tells a computer or mobile device what to do. Programs are used to perform specific tasks such as sending messages, ordering food, or making payments. For example, when we use **Paytm** to send money, the app uses programs to process the payment and show whether the transaction was successful.

2. List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both.
Hint: Think of languages like Java, Python, and JavaScript.

Programming Language Usually

C	Compiled
Java	Compiled and interpreted
Python	Interpreted

Note: These are simplified classifications for beginners. In practice, languages can use different execution methods depending on their implementation.

3. Draw a flowchart (on paper or using any online tool) for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.

BookMyShow's booking process includes selecting the movie/cinema, date and time, seats, reviewing the order, making payment, and receiving a confirmation.
(BookMyShow)

You can draw this **on paper** using these proper flowchart symbols:

START

Open BookMyShow

Select City / Location

Select Movie

Select Date & Time

Select Theatre

Select Seats

Confirm Booking

Make Payment

Payment Successful?

NO YES

Try Payment Again Booking Confirmed

Receive Confirmation

END

Symbols to use on paper:

- **Oval** → Start / End
- **Rectangle** → Process
- **Diamond** → Decision
- **Arrow** → Flow direction

4. Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.

Swiggy's ordering flow generally involves selecting a delivery address, finding a restaurant and food items, adding them to the cart, reviewing the order, choosing a payment method, and placing the order. (swiggy)

Algorithm: Order Food on Swiggy

1. **Start**
2. Open the **Swiggy app**.
3. Select or enter the **delivery address**.
4. Search for a **restaurant**.
5. Select the required **food items**.
6. Add the food items to the **cart**.
7. Open the cart and check the **order details and total amount**.
8. Select a **payment method** such as UPI, card, or another available option.
(swiggy)
9. Complete the **payment**.
10. Confirm and place the **order**.
11. Receive the **order confirmation**.
12. **End**.
