

1. Declare a string variable called songTitle and assign it the value 'Tum Hi Ho'. Print the length of the string using strlen().

```
#include <stdio.h>

#include <string.h>

int main()
{
    char songTitle[] = "Tum Hi Ho";

    printf("Song: %s\n", songTitle);
    printf("Length: %lu", strlen(songTitle));

    return 0;
}
```

Output:

Song: Tum Hi Ho

Length: 9

Spaces are also counted as characters.

2. Take input for two usernames (as strings) and compare them using strcmp(). Display whether they are the same or different.

```
#include <stdio.h>

#include <string.h>

int main()
{
    char username1[50];

    char username2[50];
```

```

printf("Enter first username: ");
scanf("%s", username1);

printf("Enter second username: ");
scanf("%s", username2);

if (strcmp(username1, username2) == 0)
{
    printf("Both usernames are same.");
}
else
{
    printf("Usernames are different.");
}

return 0;
}

```

Easy logic:

strcmp(username1, username2) == 0

means both strings are **same**.

**3. Copy the string 'Flipkart' into another string variable called shoppingApp using strcpy(), then print the value of shoppingApp.

Hint: Make sure to declare enough space for the destination string.**

```
#include <stdio.h>
```

```
#include <string.h>
```

```
int main()
```

```
{
```

```
char shoppingApp[20];

strcpy(shoppingApp, "Flipkart");

printf("Shopping App: %s", shoppingApp);

return 0;
}
```

Output:

Shopping App: Flipkart

Here:

```
strcpy(shoppingApp, "Flipkart");
```

copies **Flipkart** into shoppingApp.

**4. Build a small script that takes the user's full name as input and creates a username by copying only the first 5 characters using strcpy(). Print the generated username.

Constraint: If the name is shorter than 5 characters, use the full name as the username.**

For this question, strcpy() alone cannot copy only 5 characters. We can use strncpy() and then add '\0'.

```
#include <stdio.h>
```

```
#include <string.h>
```

```
int main()
```

```
{
```

```
    char name[100];
```

```
    char username[6];
```

```
    printf("Enter your full name: ");
```

```
scanf("%99s", name);

if (strlen(name) < 5)
{
    strcpy(username, name);
}
else
{
    strncpy(username, name, 5);
    username[5] = '\0';
}

printf("Generated Username: %s", username);

return 0;
}
```

Example 1:

Enter your full name: Dhruv
Generated Username: Dhruv

Example 2:

Enter your full name: Virat
Generated Username: Virat

Example 3:

Enter your full name: Rohan
Generated Username: Rohan
