

1. Create a simple IPL Fan Bot that takes your favorite IPL team name as input and uses if-else-if statements to print a unique cheer message for each team (e.g., 'Go Mumbai Indians!', 'Chennai Super Kings for the win!'). If the team is not recognized, print 'Team not found!'

```
let team = prompt("Enter your favorite IPL team:");
```

```
if (team == "Mumbai Indians") {  
    console.log("Go Mumbai Indians!");  
}  
else if (team == "Chennai Super Kings") {  
    console.log("Chennai Super Kings for the win!");  
}  
else if (team == "Royal Challengers Bengaluru") {  
    console.log("Go RCB! Ee Sala Cup Namde!");  
}  
else if (team == "Kolkata Knight Riders") {  
    console.log("Come on KKR!");  
}  
else if (team == "Rajasthan Royals") {  
    console.log("Go Rajasthan Royals!");  
}  
else {  
    console.log("Team not found!");  
}
```

2. Build a Zomato-style food suggestion tool: take the user's preferred meal time ('breakfast', 'lunch', 'dinner', or 'snack') and use a switch-case statement to suggest a popular dish for that time. If the input doesn't match any meal, suggest 'Try some fruits!'.

```
let meal = prompt("Enter meal time:");
```

```
switch (meal) {  
  case "breakfast":  
    console.log("Try some Masala Dosa!");  
    break;  
  
  case "lunch":  
    console.log("Try some Biryani!");  
    break;  
  
  case "dinner":  
    console.log("Try some Paneer Tikka!");  
    break;  
  
  case "snack":  
    console.log("Try some Samosa!");  
    break;  
  
  default:  
    console.log("Try some fruits!");  
}
```

**3. Create a Flipkart discount calculator that asks the user for the total cart amount. Use nested if statements to check: if amount > 2000, apply 20% discount; else if amount > 1000, apply 10% discount; else, no discount. Print the final amount to pay.

Hint: Use nested ifs to check each discount slab.**

```
let amount = Number(prompt("Enter total cart amount:"));  
  
let discount;
```

```
if (amount > 2000) {  
    discount = amount * 20 / 100;  
}  
else {  
    if (amount > 1000) {  
        discount = amount * 10 / 100;  
    }  
    else {  
        discount = 0;  
    }  
}
```

```
let finalAmount = amount - discount;
```

```
console.log("Cart Amount: ₹" + amount);
```

```
console.log("Discount: ₹" + discount);
```

```
console.log("Final Amount to Pay: ₹" + finalAmount);
```

Example: If cart amount is ₹2500:

Discount: ₹500

Final Amount to Pay: ₹2000

4. Write a program that takes a user's age and checks eligibility for three things using if-else statements: if age $\geq$ 18, print 'Eligible for Driving License'; if age $\geq$ 21, also print 'Eligible for Credit Card'; if age $\geq$ 25, also print 'Eligible for Car Rental'. Print all applicable messages for the given age.

```
let age = Number(prompt("Enter your age:"));
```

```
if (age  $\geq$  18) {
```

```
    console.log("Eligible for Driving License");  
}
```

```
if (age >= 21) {  
    console.log("Eligible for Credit Card");  
}
```

```
if (age >= 25) {  
    console.log("Eligible for Car Rental");  
}
```

Example: If age is 26:

Eligible for Driving License

Eligible for Credit Card

Eligible for Car Rental

Here, we use **separate if statements** so that all applicable messages are printed.
