

8. Employee Salary Calculator

```
#include <stdio.h>

float calculateHRA(float basic)
{
    float hra;

    if (basic < 25000)
    {
        hra = basic * 20 / 100;
    }
    else if (basic <= 50000)
    {
        hra = basic * 25 / 100;
    }
    else
    {
        hra = basic * 30 / 100;
    }

    return hra;
}

int main()
{
    int n, i;

    float basic, hra, da, gross;

    printf("How many employees? ");
    scanf("%d", &n);

    for (i = 1; i <= n; i++)
```

8. Employee Salary Calculator

```
{  
    printf("\nEnter basic salary of employee %d: ", i);  
    scanf("%f", &basic);  
  
    hra = calculateHRA(basic);  
    da = basic * 10 / 100;  
    gross = basic + hra + da;  
  
    printf("HRA = %.2f\n", hra);  
    printf("DA = %.2f\n", da);  
    printf("Gross Salary = %.2f\n", gross);  
}  
  
return 0;  
}
```
